SUMMARY

An Artificial Intelligence and Machine Learning undergraduate student experienced in developing analytical solutions across various disciplines, including computer vision, natural language processing, and audio analytics. Rather than simply integrating pre-built algorithms, I am deeply interested in tackling core engineering challenges in data collection, processing, and interpretation. I aim to develop high-impact projects at the intersection of data infrastructure and machine learning in dynamic, high-volume data industries such as aerospace, motorsports, and global tech.

EDUCATION

B.S. in Artificial Intelligence and Machine Learning Kocaeli University GPA: 3.53	2024 – Present Kocaeli,Türkiye
Highschool Eskişehir Borsa İstanbul Scientific Highschool	2020 – 2024 Eskişehir,Türkiye

SKILLS

Programming Languages

- Python, MATLAB, SQL

Tools & Version Control

- Git & GitHub, Docker (Basic)

Machine Learning & Data Science

- PyTorch, TensorFlow, scikit-learn, Pandas, NumPy, Seaborn, Keras, OpenCV

CERTIFICATES

- Data Analysis in MATLAB
- Machine Learning Techniques in MATLAB

LANGUAGES

Turkish
Native

English
Fluent

PROJECTS

Smart Guidance System Design (R&D Project) Ongoing Developing guidance and target-tracking mechanisms utilizing intelligent systems infrastructure.	2026 – Present
Automated Data Pipeline & Web Scraping Built a Python-based data pipeline to automatically harvest and process EXFOR experimental nuclear reaction cross-section data for use in TALYS simulations and machine learning models.	2025 – 2026
RAG-Based Student Advisor Chatbot for University Designed a Retrieval-Augmented Generation (RAG) based smart assistant capable of local document querying with a 4-person team to accurately answer university students' questions.	2026
Computer Vision and Hand-Tracking System with MediaPipe Established image processing pipelines using MediaPipe and OpenCV to detect real-time hand gestures and joint landmarks with high accuracy.	2025

PUBLICATIONS

Comparative Analysis of Lung Cancer Classification using ResNet-Based Feature Extraction and Machine Learning Algorithms on Chest CT Images <i>Samet Mert Dik, Batın Dikilitaş, Abdullah Naim Yolağan</i> Awarded first place for the co-authored paper	2026
Deepfake Audio Detection using Deep Learning <i>Abdullah Naim Yolağan</i> Developed and presented a ResNet-18 based classification model to analyze performance and robustness trade-offs under various audio compression algorithms by converting raw audio data into spectrograms.	2026

ORGANIZATION, LEADERSHIP & VOLUNTEER EXPERIENCE

Co-Founder & Executive Board Member <i>Smart Systems and Data Science Club</i> • Spearheading the official establishment of the club to cultivate the AI and data science ecosystem within the university. • Designed the organizational structure, including the operational charter, executive board eligibility requirements, and sub-committee frameworks.	2026 – Present Kocaeli University
AI Instructor & Workshop Facilitator • Organized an interactive educational seminar themed "What is AI, How Does it Work, and How is it Used?" for students in the "Innovative Classroom" program. • Conducted a hands-on workshop featuring a live software demonstration to help participants experience artificial intelligence concepts in practice.	2026 Kocaeli Anadolu Lisesi
Organization and Steering Committee Member • Actively executed end-to-end congress planning, session management, and operational coordination during the event.	2026 KOUBAK'26 Student Congress
